Delete claims 1-23 and replace with the following claims:

--24. An information delivery system that is connected to communication networks, comprising:

an information delivery server comprising:

- (a) information receiving modules for receiving messages from a sender in communication with a first communication network and for converting the messages into a form suited for an information processing unit in communication with the information receiving modules;

- FOR F062T01 89244650
- (b) the information processing unit being adapted to process the messages based on key data contained in the messages, fetch information requested in the messages, handle the fetched information and develop replies to the messages;
 - (c) information sending modules in communication with the information processing unit for converting the replies to a form suited for the receiver of the reply, the receiver being the sender or a receiver in communication with a second communication network; and
 - (d) a user interface in communication with the information delivery server, the user interface having a terminal connected to the information delivery system for creating and maintaining a service in the information delivery system.

25. The information delivery system according to claim 24 wherein the information sending modules are in communication with an information control module for receiving an answer therefrom for sending the replies via a sending module to the receiver of the reply.

27. The information delivery system according to claim 24 wherein the information processing unit is adapted to handle the messages and the information requested by means of a service product that has a command list program comprising a list of functions.

28. The information delivery system according to claim 27 wherein the command list program is stored in a database of the information delivery server.

29. The information delivery system according to claim 24 wherein the first communication network is a wireless communication network.

PATENT

30. A method of delivering information to communication networks, comprising:

- (a) receiving messages from a first communication network;
- (b) converting the messages to a form for further processing;
- (c) processing the messages based on key data of the messages;
- (d) fetching information requested in the messages;
- (e) processing the fetched information;
- (f) preparing replies based on the fetched information;
- (g) converting the replies to a first form suited for the first communication network if the replies are sent to the first communication network and converting the replies to a second form suited for the second communication network if the replies are sent to the second communication network; and
- (h) sending the replies to the first communication network or a second network.

31. The method according to claim 30 wherein the method further comprises fetching information requested in the

PATENT

messages from a plurality of networks or from a data base stored in the information delivery server.

32. The method according to claim 31 wherein the method further comprising processing the messages and fetching the information requested by means of a service product, including simple functions in a command list program, created in the information delivery system.

33. The method according to claim 30 wherein the method further comprises storing an information delivery product, comprising the information requested, in a database.

34. The method according to claim 33 wherein the method further comprises modifying the information delivery product with parameters added to fields of an information delivery product program.

35. The method according to claim 33 wherein the method further comprises describing a function of the information delivery product with a binary program module and transferring the binary program module to an information delivery system.

RF:sj 1/29/01 290.745USN

PATENT

36. The method according to claim 30 wherein method further comprises describing a function of an information delivery product with a program stored in the first communication network.

37. The method according to claim 30 wherein the method further comprises storing data from a set of information delivery products in an information delivery server.

38. The method according to claim 30 wherein the method further comprises storing data about a user, the data excluding identification data of the user.

39. The method according to claim 30 wherein the method further comprises constructing an information delivery product to conform to an mediated information and to prevent access to predetermined data in the communication network.

40. The method according to claim 30 wherein the method further comprises delaying the replies prior to sending the replies.--
